

1. Project Proposal: Bike-Zone

Project intro:

Bike Zone is a web-based application, which has shopping cart where the user can access the Stocks and can purchase the Bike from it. This is basically an online store, where the transaction takes place online.

The transaction takes place and the user can avail the facility of having the good/shipment to be delivered at his will.

Payment has been integrated into the system and once the user checks out of the cart he enters the next stage, payment where the user has the option to pay using credit card after that the shipment is being delivered to him.

2. Career Launcher

Project intro:

The objective of the project is to design and develop Resume Mart, which is a place for Job Seekers and Job Providers to meet. The Database should collect also the minute details about the Job Seeker and Provider.

Resume Mart is designed to collect multiple resumes from the Job Seeker. Resume Mart aim is to provide Job Provider with enormous amount of data.

Advantages:

1. Job updates are easily available.
2. Job seekers can apply at a time to all job openings.
3. Job seeker can keep a check on the job status.

3. Online Course Portal for a campus

Project intro:

This project aims at creating a Courses portal for a campus/organization. This allows registered users of the system to join a course available in the site and access the materials published for the course. People can register themselves as students of a course or Faculty for a course. When a person registers himself as a Faculty, an approval mechanism should be triggered which sends an email to the Administrator for approving the person as a Faculty. There will be an admin approval page where admin can approve the faculty members for the course.

4. Online Cinema Ticket Booking

Project intro:

This project is aimed at developing an online ticket reservation system for Cinema Halls. The Ticket Reservation System is an Internet based application that can be accessed throughout the Net and can be accessed by any one who has a net connection. This application will automate the reservation of tickets and Enquiries about availability of the tickets. This application includes email confirmation for the tickets.

5. Hospital management System

Project intro:

It automates all operations of Medium & Multispeciality hospitals. It automates from Front Office Operations like In-patient Module and out patient module to Back Office Operations. Platinum version provides Inventory Management Package with pharmacy billing, Human Resources & Payroll Management with Lab management.

6. Online Leave Management System

Project intro:

Online Leave Management System is aimed at developing an online leave management system that is of importance to either an organization or a college. The Online Leave Management System is an Intranet based application that can be accessed throughout the organization or a specified group/Dept. This system can be used to automate the workflow of leave applications and their approvals. The periodic crediting of leave is also automated. There are features like email notifications, cancellation of leave, automatic approval of leave, report generators etc in this system.

Online Leave Management System helps the entire employee's leaves information such as type of leave, employee id, and leave(s) between dates, pending status, leave balance summary, leave encashment and leave cancellation details.

Online Leave Management System helps the all the employee's to Apply, Cancel, and Monitor the Leaves Information. Administrator will Grant, Revoke and Cancel the leave application.
